

# Which AVs are interesting and non-obvious?

- Most variation exists at low ( $<1\%$ ) frequency.
- Variants more frequent than 5% are rare ( $\sim 100$ ) and can be exhaustively tested.

# Which AVs are interesting and non-obvious?

- Less common variants (e.g. 0.1% - 2%) are potentially interesting and non-obvious
- Too many (>2000) to test exhaustively
